## Indian Weather - Educational Document

### Introduction to Indian Weather

India has a diverse climate influenced by the Himalayas, the Thar Desert, and the Indian Ocean. The country experiences four main seasons: winter, summer, monsoon, and post-monsoon. Weather affects agriculture, water resources, and daily life across all states.

## The Monsoon System

The Southwest Monsoon is the most significant weather feature in India. It arrives in June and lasts until September. It brings about 75% of the country's annual rainfall. States like Kerala, Karnataka, and Maharashtra receive heavy rains, while Rajasthan gets minimal rainfall. The monsoon is driven by the pressure difference between the Indian Ocean and land.

### Temperature Zones

Northern India, including Delhi and Punjab, experiences extreme temperatures: hot summers above 40°C and cold winters near 0°C. Southern India has a tropical climate with warm winters and moderate summers. Coastal areas like Mumbai and Chennai are humid. Hill stations such as Shimla and Darjeeling remain cool throughout the year.

## Cyclones and Extreme Events

The Bay of Bengal and the Arabian Sea generate cyclones that hit eastern and western coasts. Cyclone seasons peak in May and October-November. Floods, droughts, and heatwaves also impact large populations. Modern weather satellites and Doppler radars help predict these events.

### Weather and Agriculture

Indian farming depends heavily on timely rains. Kharif crops need monsoon water, while Rabi crops rely on winter moisture. Droughts in Maharashtra or excess rains in Bihar can affect food prices nationwide. IMD and ISRO provide forecasts to help farmers plan sowing and harvesting.

## Sample Questions

1. Which season brings the most rainfall to India?  
A) Winter B) Summer C) Monsoon D) Post-monsoon
2. From which direction does the Southwest Monsoon arrive?  
A) North B) East C) South D) West
3. Which city is likely to have the coolest summer?  
A) Delhi B) Chennai C) Shimla D) Jaipur
4. The Arabian Sea and Bay of Bengal mainly cause which event?  
A) Earthquake B) Cyclone C) Tsunami D) Volcano
